Annotated list of the Arctiidae of Turkey (Lepidoptera)

Ahmet Ömer Koçak Muhabbet Kemal

Abstract: Annotated list of the Arctiidae of Turkey (Lepidoptera). *Cesa News* 111: 1-60, 36 figs., 30 maps.

Totally 67 species and 49 genera are listed alphabetically. Synonymous names, global distributional information are mentioned. Totally 30 distributional maps are prepared. Some material in the collection and observational information in nature are illustrated. Important publications on the family are added.

Key words: Arctiidae, Lepidoptera, Turkey, fauna, distribution.

The first author published a detailed faunistical list of the Arctiidae of Turkey in 1991 (Koçak, 1991). During the intermediate publications on the Entomofauna of Turkey Project, and the Checklists of the Lepidoptera of Turkey, the authors updated several times the taxonomical and faunistical information on the Arctiidae (Koçak & Kemal, 2006, 2008, 2009, etc.).

In the present paper, totally 67 species in 49 genera are listed alphabetically. The synonymous names are arranged chronologically. Distributional information are mentioned to each species as codes.¹ Totally 30 global distributional maps are prepared by the first author for this paper, by using the distributional codes. Original references are also added to some taxa. In nature, the observational information of the second author are illustrated by herself. Several images of the prepared specimens from the collection are also given. All the species are identified by the authors. The list presented below is generated from the database of the info-system of the Cesa.²

At the end of the list, selected 220 publications on the Arctiidae of Turkey are arranged according to the authors.

¹ List of the codes used can be downloaded freely from this address: <http://www.members.tripod.com/entcesa/Code.pdf>
